

11 years of experience · Hangzhou · iOS

Junhui Xia

Senior iOS Engineer

17557282155 · hello@uxiu.me · Hangzhou, Zhejiang, China · changzuibuxingzimeng
• Expected salary: Negotiable

Profile

11 years of experience in iOS app architecture, development, App Store submission, and production troubleshooting. Hands-on work across Bluetooth LE, Apple Watch, Apple Health, widgets, Live Activities, and React Native, with experience connecting hardware, mobile apps, and Apple ecosystem capabilities into shippable products.

- Proficient in Objective-C, Swift, and SwiftUI; able to maintain legacy projects while adopting new Apple ecosystem capabilities.
- Developed and shipped multiple apps; familiar with Bluetooth OTA, logging, background execution, notifications, light/dark mode, and localization.
- Comfortable using AI tools to improve delivery efficiency; currently learning Flutter and has used React Native in production work.

Core Skills

Objective-C

Swift / SwiftUI

CocoaPods / Modularization

Apple Watch / Apple Health

Bluetooth / OTA

React Native

CocoaPods

App Store Submission

Production Log Troubleshooting

Enterprise OA

Work Experience

Dreame Technology (Suzhou) Co., Ltd.

Feb 2026 - Present

iOS Engineer

- Participated in Dreame smart ring app development; the app uses a React Native shell, while iOS and Android connect native SDK capabilities to RN.
- Built bridge APIs between the native SDK and React Native, covering device connection, health measurement, music playback monitoring, and subscription status.
- Delivered measurement and display flows for heart rate, body temperature, blood oxygen, and sleep data; integrated Apple Health to save ring-collected data.
- Implemented Apple in-app purchase subscription features, including product loading, purchase, restore purchase, subscription validation, and entitlement unlocking.

MicroTech Medical (Hangzhou) Co., Ltd.

Aug 2022 - May 2025

iOS Engineer

- Independently designed and developed the Apple Watch app, including login, error states, data rendering, BLE connection, charts, database storage, logs, networking, watch-face display, background execution, and scheduled refresh.
- Delivered app logging, widgets, Bluetooth OTA firmware upgrades, Live Activities, Apple Health sync, light/dark mode, localization, and notification systems.
- Used CocoaPods to package shared foundation components, business components, and an iOS SDK; wrote SDK docs, software implementation docs, and code traceability docs.
- Handled App Store submission and rejection issues, analyzed user logs, fixed production defects quickly, and won the 2022 Best Newcomer award.

iOS Engineer

- Independently owned development, maintenance, App Store submission, and ongoing optimization of iOS projects including Jingtian Platform, Hupo CRM, and Baihe Service Platform.
- Participated in requirement review and scheduling, packaged private Pods and business components, and integrated the Yunti questionnaire Flutter module.
- Provided native capabilities for H5 workflows, including phone calls, image picking, camera capture, file upload/download, location, and WPS preview or editing.

Work Experience & Selected Projects

Experience And Projects

● Work Experience

Hangzhou Fadai International Trade Co., Ltd.**Mar 2017 - Sep 2019****iOS Lead / Project Owner**

- Independently led architecture, development, testing, App Store submission, and delivery progress for the "Mai Hao Jiu" and "Buy Hao Jiu" apps.
- Designed shared base classes, navigation, refresh, empty states, search, Bluetooth printing data packages, and used multi-target setup for shared app capabilities.
- Worked with the business owner, operations staff, and sales team to understand real usage scenarios, define solutions, and control delivery progress.

Hangzhou Shifu Technology Co., Ltd.**Nov 2015 - Sep 2016****iOS Engineer**

- Developed, released, and maintained the local lifestyle app "Lai Yi Dan", covering location, online payment, product display, coupons, and check-in rewards.

● Selected Projects

MicroTech Dynamic**iOS · Aug 2022 - May 2025**

A glucose monitoring app that connects iPhone and Apple Watch to CGMS Bluetooth devices, reads real-time glucose data, stores it locally, syncs it to cloud services, and records logs for production troubleshooting.

Responsibilities

- Independently delivered Apple Watch business logic, UI states, data rendering, Bluetooth connectivity, charts, database storage, logs, and networking.
- Built app logging, widgets, Bluetooth OTA firmware upgrades, Live Activities, Apple Health, light/dark mode, localization, and abnormal-state notifications.
- Built reusable CocoaPods components, business components, and customer integration SDKs, and produced SDK docs, software implementation docs, and code traceability docs.

Technical Highlights

SwiftUI, Bluetooth Low Energy, Apple Watch watch-face display, background execution, scheduled refresh, Apple Health, app logs, App Store compliance certificates, and privacy-permission review handling.

Jingtian Platform**iOS · Jul 2020 - Mar 2022**

A comprehensive enterprise OA platform with labor registration, employee search, clock-in/out, attendance approval, asset inventory, visitor registration, operations penalty tickets, and integrations with Haizao Data Platform, Hupo CRM, and Yunti Questionnaire.

Technical Highlights

Componentized Pods, Lottie launch guide animation, GCD synchronization for multiple network requests, Charts, AMap, Umeng analytics, JPush, Baidu OCR, Tencent Bugly, WKWebView with

WebViewJavascriptBridge hybrid development, Flutter modules, and binary reordering for startup optimization.

Projects & Additional Information

Additional Information

● Selected Projects

Mai Hao Jiu / Buy Hao Jiu

iOS · Mar 2017 - Sep 2019

"Mai Hao Jiu" is a B2B e-commerce app covering OA, messaging, Bluetooth printing, customer management, inventory, order placement, returns, sales check-ins, trip reports, leave, and expenses. "Buy Hao Jiu" is a B2C app covering campaigns, ordering, messaging, and social community features.

Technical Highlights

MVC/MVVM, base class abstraction, custom navigation and refresh controls, portable Bluetooth printers for customer receipts, AMap-based map dragging to mark customer locations, JPush, Umeng IM, Alipay, and WeChat Pay.

Lai Yi Dan

iOS · Nov 2015 - Sep 2016

A local lifestyle service app for nearby supermarket purchases and delivery, covering location services, online payment, product display, coupons, and check-in rewards.

● Education

Xinxiang University

2011 - 2015

Bachelor's · Information and Computing Science

● Communication

- Responsible and able to collaborate with product, QA, backend, and hardware teams to drive requirements to delivery.
- Can analyze requirements from real usage scenarios and provide practical mobile implementation plans.
- Can write technical implementation docs, SDK docs, and compliance traceability docs.
- Native Chinese speaker; reads English technical documentation.
